camillosirianni®

FURNISHING COLLABORATION SINCE 1909

Since 1909 Camillo Sirianni have been producing furniture for the education sector.

The new **I-SERIES**; **COLLABOR8**; and **ELEMENTS** product range from Camillo Sirianni have been specifically designed to work together with each other and with the teaching approach of Collaborative learning.

Collaborative learning is an educational approach to teaching and learning that involves groups of students working together to solve a problem, complete a task, or create a product. According to Gerlach, "Collaborative learning is based on the idea that learning is a naturally social act in which the participants talk among themselves (Gerlach, 1994). It is through the talk that learning occurs".

At Sirianni we feel that the modern learning studio should be furnished with the tools that allow the teacher as facilitator to manage the learning experience and the students to feel comfortable in that environment.

Our goal at Sirianni is to furnish collaboration in the modern learning environment.

The ISERIES from Camillo Sirianni has been specifically designed for the Collaborative learning environment. The ISERIES incorporates everything from the ICAN mobile workstation through to the quintessential IAM chair and was designed to be used in conjunction with the COLLABOR8 and ELEMENTS table ranges.

While flexibility of use and movement was the key design remit, the holistic approach adopted in the design of the ISERIES means that the learning environment is brought together both in the literal sense of movement within space and also in the figurative senses of coordination of colours, forms, and textures which combine

to give an effective, comfortable and aesthetically pleasing space to encourage learning and concentration. While the whole range is highly student focused we have also provided practical solutions for educators giving the flexibility of movement and space management with the least possible effort.

ican

FURNISHING[®]
COLLABORATION

The ICAN from Camillo Sirianni is a self-contained student focused work station which offers freedom of movement, an ergonomic seating position and an ample work surface.

ICAN is highly flexible, comfortably accommodating a wide variety of body shapes and heights. Featuring a 180° rotational movement of the work surface which allows the student to find the right position for them whether they be right or left handed without having to specify. This rotation is fundamental in that it allows the student to exit the seat or change position without having to disturb the contents of the work station. ICAN offers a 54x34cm work surface with a 180° rotation both at the top and bottom mounting points giving complete flexibility of movement. The work surface features a balanced scratch and noise resistant bi laminate surface with a European beech wood ply centre giving a high degree of strength and a pleasant visual effect. A pen tray is also incorporated as standard.

The ICAN seat shell was designed by the renowned Italian architect Giovanni Baccolini. His inspired design combines beauty, flexibility of movement, and anatomical support.

The chair features a scalloped rear which increases flexibility and also allows adequate air flow to keep the student comfortable and is available in 5 different colours. The Polyurethane construction gives a mechanical resistance in excess of 500 kgs without requiring the added supports which would be required with a PP seat shell.

The cantilever design which is in part where the ICAN (Italian Cantilever) derives its name, gives the chair flexibility both in the sense of cushioned flex and in that it allows a very natural reverse seating position which is enhanced by the shape of the shell and the rotation of the work surface.

ICAN features high density foot rest covers on the front casters and on the front of the bag rack. These function both to protect the unit against wear and also to provide a more flexible and comfortable foot position for the student. The chair also features a balance bar at the rear of the frame and an additional two vertical supports which provide both strength and balance to the structure.

ICAN is supported on 65mm TPU castors which provide incredible stability, anti-tilt, and comfortable freedom of movement throughout the learning environment. Featuring as standard an under seat storage area and drinks holder the ICAN allows students to make themselves comfortable thus enhancing concentration and learning.

FURNISHING[®]
COLLABORATION

The IMOVE series of chairs are designed for use with the COLLABOR8 and ELEMENTS desk series to provide an easily reconfigurable learning environment. Using this system the learning environment can be changed in minutes from single learning small group collaborative learning or whole group.

IMOVE uses the same 65mm castors that are found on the ICAN series allowing freedom of movement throughout the learning environment. The castors offer excellent point stability and anti-tilt characteristics. The flexibility of the IMOVE makes it the perfect choice for the modern classroom or the library environment.

IMOVE comes with the option of a convenient under seat storage area ideal for putting bags books or computers.

IMOVE is also available with the choice of two seating shells. The Polyurethane Giovanni Baccolini designed shell that is used on the ICAN is the premium choice for the IMOVE. In addition we can offer a Polypropylene shell which is ideal for larger orders where budgets are the determining factor. The design of both shells offer the possibility to sit in the reverse position combined with comfort and anatomical.

iam

FURNISHING[®]
COLLABORATION

IAM is the essential product, the basics from where the IMOVE and ICAN spring. Available in either a four leg or cantilever form these chairs are designed to be used with the fixed versions of the ELEMENTS range.

IAM is available with the choice of two seating shells. The Polyurethane Giovanni Baccolini designed shell that is used on the ICAN is the premium choice for the ICAN. In addition we can offer a Polypropylene shell which is ideal for larger orders where budgets are the determining factor. The design of both chair shells are available in a variety of colours and offer the possibility to sit in the reverse position combined with comfort and anatomical support. Both shells are rigorously tested against deformation and for structural integrity. IN addition we can offer a wide range of frame colours.

All the IAM products conform to EN1729 specifications relating to the correct height to be used for different heights of students. IAM fulfils the essential requirements of a sturdy, good looking, and ergonomically designed multipurpose chair which can fit easily into all learning environments.

collabor8

The COLLABOR8 range has been designed to be used either standalone, or as part of a modular set-up. The form of the two principle components the MELE and CERCHIO “Apple and Circle in Italian” combine to form COLLABOR8. The individual units can be combined in a variety of different compositions for collaborative learning or can be used separately as individual work stations or for small groups.

COLLABOR8 table are supplied with two casters which permit effortless repositioning of the tables based on the different classroom management preferences including those that support collaborative learning, small group work, and individual based tasks.

COLLABOR8 has been specifically designed for use with the IMOVE series of chairs and the work surface colour choice complements the chair colour options. The 4 basic laminate colour options used within the range offer a pleasing yet at the same time calming pallet which will fit in well with most wall and floor colour schemes. The beech wood core is exposed at the edge to give a variation in texture and colour which helps to bring together the area.

elements

The ELEMENTS table range forms the basic building blocks which when combined create something new. The range comprises of a both Trapezoidal and Square forms. As with the COLLABOR8 range these come with two casters to allow effortless repositioning depending on the learning requirements. Following the same colour scheme these units fit in seamlessly with the IMOVE and COLLABOR8 ranges. For the more traditional based classrooms these units come without casters and can be used with the IAM range.
